Business student who ships AI products end to end: an open-source agent orchestration platform, Wandr, the travel-social app I co-founded as CTO, a calibrated sports-props research tool, and a published model-distillation experiment. Looking for AI product or AI ops PM internships for 2027. Product judgment, plus the ability to build the prototype myself.

SELECTED PROJECTS

Boardroom · open-source AI agent orchestration platform github.com/AbhiPoluri/boardroom · 2026

Next.js · TypeScript · MCP · node-pty · Git worktrees · 164 commits · 145 tests · MIT

- Built a control plane that runs Claude Code, Codex, OpenCode and Hermes agents in isolated Git worktrees, with a sequential or parallel plan engine, a review queue with PR reverts, a resolver agent for merge conflicts, and a nine-tool MCP server.
- Chose bring-your-own-key auth alongside subscription mode before Anthropic tightened programmatic credits in June 2026, so the product kept working when platform pricing changed.

PropKing · sports-props research tool propking.vercel.app · 2026

Next.js · Supabase edge functions · Postgres · pg_cron · 298 tests

- Shipped two-book line ingestion, a de-vigged parlay slip with per-leg grades, auto-grading against box scores, and hourly cloud ingestion.
- Fit a calibration model on 10,500 settled bets and found the hit-rate signal added nothing beyond book prices. Re-scoped the product from pick generator to cross-book research board and published its Brier scores and ROI on an insights page.

Errand · agent harness for people who have never heard of agents github.com/AbhiPoluri/errand · 2026

TypeScript · Electron · SQLite · Chrome extension · 30 test suites

- Wrote the agent loop, tools, streaming, memory and sessions from scratch, with the model SDK used for transport only.
- Designed plain-language approvals, a structural Undo, and a resume engine that checkpoints at tool boundaries so a crash mid-approval restarts the exact turn.

SQL-R1 · distilling DeepSeek into Qwen2.5-Coder-7B github.com/AbhiPoluri/sql-r1 · 2026

MLX-LM · LoRA · SFT · DPO · BIRD benchmark · \$5.83 total compute spend

- Raised BIRD text-to-SQL execution accuracy from 47.5% to 55% on Apple Silicon. Found that DPO hurt and that the automatic final checkpoint had overfit; the best model was the iteration-50 save. Write-up published on LinkedIn.

Also shipped: abhimem (local-first memory MCP server for Claude Code) · par0 (prompt-golf game on gpt-oss-20b with a live leaderboard) · Cleanup (macOS menubar text rewriter) · NotesGraph (semantic knowledge graph) · Nexus Planner · Ollama Router · ClaudelnOne (213 skills, 37 agents)

EXPERIENCE

Co-founder & CTO · Wandr, travel-social app, with Parth Shah wandrapp.ca · Jun 2026 – present

Next.js · Supabase · Capacitor (iOS) · Resend · Sign in with Apple · 185 of 236 commits

- Built the discovery deck that ranks travellers by trip overlap, timing and shared interests, plus matches, group chat and the iOS build. Live and invite-only behind a waitlist.
- Owned launch readiness: terms under BC law, a moderator report queue, notification preferences, data export, accessibility pass, and a transactional email system with idempotent sends.

Founder · retail arbitrage business 2023 – 2024

- Grew a resale business from \$0 to \$3–5k in revenue: found mispriced inventory, validated demand before buying, and ran sourcing, pricing, logistics and customer service alone.

EDUCATION

Simon Fraser University · Beedie School of Business, Vancouver BC Expected May 2028

- Bachelor of Business Administration. Concentration: Strategy, Analytics and Entrepreneurship.
- Google Project Management and Google Data Analytics certificates (Coursera).

SKILLS

Product	PRDs, customer interviews, pricing and packaging, evals and calibration, launch readiness, product analytics
AI & agents	Claude API and Agent SDK, MCP, OpenAI API, Ollama, LoRA fine-tuning, embeddings and retrieval, agent orchestration
Engineering	TypeScript, Python, Swift, SQL · Next.js, React, Node.js, Electron · Supabase, Postgres · Docker, GitHub Actions
